TITLE: Defoaming of crudes by a new method using ultrasound

SOURCE: Ukraine. Ministerstvo vysshego i srednogo spetsial'nogo obrazovaniya. Akustika i ul'trazvuk, no. 2, 1966, 84-86

TOPIC TAGS: crude petroleum, ultrasonic petroleum purification

ABSTRACT: A new method for dehydrating and desalting crudes by using ultrasound has been developed at the Kuybyshev Polytechnic Institute. The method was tested on a semi-works scale in the defoaming unit of the Radayevka Petroleum Plant. The unit, which has a capacity of 700 ton per day, and the procedure are briefly described in the source. The experiments were conducted with heavy high-sulfur Radayevka crudes which contained, on the average, 78,000 mg/l salts and 23% water. Ultrasonic defoaming was carried out as a one-step operation at 95—100C using the NChK anti-foaming agent whose consumption varied from 6 to 8 kg per ton. After defoaming, the crudes were allowed to settle for 24 hr at 40—45C. The ultrasonic

Card 1/2

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 14, 1965, 64

TOPIC TAGS: brake fluid, anticorrosion additive, antifreeze

ABSTRACT: This Author's Certificate introduces a hydraulic brake fluid based on xylithane, methanol fraction, anticorrosion additives and thickening agents. The fluid is made more resistant to freezing, the rate of corrosion in the sleeves is reduced and a wider selection of raw materials is provided by adding 300 wt. % furfural to a 1:1 mixture of xylithane and methanol fraction.

TITLE: For improved accuracy in celestial navigation

SOURCE: Aviatsiya ikosmonavtika, no. 1, 1966, 73-74

TOPIC TAGS: celestial navigation, navigation compass, navigation equipment

ABSTRACT: Two improvements to existing Soviet aircraft navigation equipment are presented. The first is an accessory mounting unit (see Fig. 1) for the AK-53p

Fig. 1. AK-53p mounting

Card 1/3

L 12981-66

ACC NR: AP6003295

astrocompass set, which has a sliding fit with the NKPB-7 sight mounting bracket. The unit consists of a compass standard 1, a textolite plate 2, a dural post 3, an iron base plate 4, and four 5-mm-diameter iron bolts 5 for joining the standard [sic] and the base plate to the post. The second improvement is a new navigational protractor (see Fig. 2). The base has a scale with 60 graduations (arc minutes).

Fig. 2. Navigation protractor

Each graduation of 1.85 mm corresponds to the linear value of one minute of arc for a 1:1,000,000-scale chart. On a 10 km:1-cm chart, each graduation represents 1.85 km. When plotting an astronomical line of position on a 1:1,000,000-scale chart, the navigator marks off the difference between the measured and computed altitudes directly from the protractor scale in minutes without converting this difference from tables into a linear value. On charts with scales of 20, 30,

Card 2/3

L 12981-66

ACC NR: AP6003295

40 km:1 cm, the above difference is correspondingly reduced on the chart by 2, 3, or 4 times. Orig. art. has: 2 figures. [LB]

TITLE: An operational method for solving linear differential-difference equations with constant coefficients

SOURCE: Differentsial'nyye uravneniya, v. 2, no. 9, 1966, 1193-1200

TOPIC TAGS: differential equation, difference equation, linear differential equation, Laplace integral, Laplace transform

ABSTRACT: A solution $u(t)$ is sought for the equation

$$\sum_{l=0}^m \sum_{j=0}^n a_{lj} u^{(j)}(t - \omega_l) = f(t), \quad t > 0,$$

$$0 = \omega_0 < \omega_1 < \dots < \omega_m$$

at $t > 0$, continuous in its n derivatives, and satisfying the conditions

$$u^{(j)}(t) = \varphi^{(j)}(t), \quad t \in E_0 = [-\omega_m, 0] \quad (j = 0, 1, \dots, n-1).$$

The substitution

$$u^{(k-1)}(t) = y_k(t) \quad (k = 1, \dots, n).$$

Card 1/3

UDC 517.949.22

ACC NR: AP6036289

transforms the equation into the differential-difference system of linear equations.

$$\sum_{i=0}^m [A_i y'(t - \omega_i) + B_i y(t - \omega_i)] = f^*(t), \quad t > 0,$$

$$0 = \omega_0 < \omega_1 < \dots < \omega_m,$$

where $f^*(t)$ and $y(t)$ are n -dimensional vector functions

$$f^*(t) = \begin{pmatrix} f(t) \\ 0 \\ \vdots \\ 0 \end{pmatrix}, \quad y(t) = \begin{pmatrix} y_1(t) \\ \vdots \\ y_n(t) \end{pmatrix}.$$

A_i, B_i are $n \times n$ square matrices, and $\det A_0 = a_{on}$. Initial conditions are

$y(t) = \varphi^*(t), \quad t \in E_0 = [-\omega_m, 0],$ where $\varphi^*(t)$ is an n -dimensional vector function with the components $\varphi(t), \varphi'(t), \dots, \varphi^{(n-1)}(t)$. The author proves that there exists a unique solution for this system of equations with this set of initial conditions. The problem stated may be solved with the use of a Laplace transform. If for all $t \geq 0$,

$$|f(t)| \leq c_1 e^{c_2 t}, \quad c_1 > 0, \quad c_2 > 0,$$

then there exist constants c_3, c_4 , such that the solution of the basic normal

ACC NR: AP6036289

problem satisfies the inequalities

$$|u^{(j)}(t)| \leq c_j e^{\lambda t}, \quad t \geq 0 \quad (j = 0, 1, \dots, n).$$

The Riemann-Mellin formula may be used to find $u(t)$, and an integral Laplace function enters as a member of the formula. The application of the Laplace integral was taken from V. A. Ditkin and P. I. Kuznetsov (Spravochnik po operatsionnomu ischisleniyu. M.-L., 1951). Orig. art. has: 27 equations.

AUTHOR: Dyshko, A.L.

TITLE: Solving von-Mises' equation in boundary-layer theory

SOURCE: Akademiya nauk SSSR. Vychislitel'nyy tsentr. Vychislitel'naya matematika, no. 7, 1961, 181 - 186

TEXT: Von Mises' equation is solved by means of a stable difference scheme. The original equation is

$$\left. \begin{aligned} \frac{\partial Z}{\partial y} &= \sqrt{V(y) - Z} \frac{\partial^2 Z}{\partial \psi^2}, \\ Z(0, y) &= V(y) > 0, \\ Z(\infty, y) &= 0, \\ Z(\psi, 0) &= 0. \end{aligned} \right\} \quad (1)$$

With $T \rightarrow 0$, the quantity $\partial^2 Z / \partial T^2 \rightarrow \infty$. A change of variables is effected; Eq. (1) is written (in the dimensionless variables):

$$\frac{\partial u}{\partial t} = \sqrt{(1-x)U(t) - u} (1-x)^{3/2} \frac{\partial^2 u}{\partial x^2}, \quad (2a)$$

$$u(0, t) = U(t) > 0, \quad (2b) \quad \checkmark$$

Card 1/4

S/558/61/000/007/008/008
D299/D301

Solving von-Mises' equation ...

$$u(1, t) = 0 \text{ (2c)}, u(x, 0) = 0 \quad (2d)$$

where $U(t) = V(\mathbb{T}_0^2 t)$. With $x \rightarrow 1$, one obtains $u \rightarrow 0$. Hence $\partial^2 u / \partial x^2 \rightarrow \infty$, for $x \rightarrow 0$, i.e. a singularity results. The character of this singularity is investigated. Denoting $p(x)/(1-x)^{3.5} = q(x)$, one obtains (instead of Eq. (2a)):

$$q(x) = \sqrt{U_0(1-x)} - u u''. \quad (3)$$

After transformations, the solution to Eq. (3) in the neighborhood of $x = 0$, is obtained

$$u = a + bx + cx^{3/2} + dx^2 + b(x^2), \quad (4)$$

where a, b, c, d are arbitrary constants. The difference scheme for solving Eq. (2), is constructed as follows: The grid $x_m = \frac{m^{4/3}}{M^{4/3}}$, \checkmark

$t_n = n\tau$, is selected; the choice of such a grid makes it possible to readily evaluate the approximation error and stability of the difference scheme 2/4

S/558/61/000/007/008/008
D299/D301

Solving von-Mises' equation ...

ference scheme; in addition, it is also possible to know with great accuracy the solution in the neighborhood of the line $x = 0$. For the second derivative of the solution, one obtains

$$\frac{\partial^2 u}{\partial x^2} \approx \frac{3}{4} c_m x^{-1/2}, \quad \frac{\partial^2 u}{\partial x^2} \Big|_{x=x_m} = \frac{3}{4} c_m x_m^{-1/2}, \quad (5)$$

where

$$c_m = \frac{M^2 \{ u_{m-1}^n [(m+1)^{4/3} - m^{4/3}] - u_m^n [(m+1)^{4/3} - (m-1)^{4/3}] + u_{m+1}^n [m^{4/3} - (m-1)^{4/3}] \}}{(m-1)^{4/3} (2m+1) + 4m^{4/3} \cdot m - (m+1)^{4/3} (2m-1)}$$

By a substitution, one obtains the following difference scheme for the solution:

$$u_m^{n+1} = u_m^n + \frac{3\tau M^{8/3}}{4m^{2/3}} \sqrt{\left(1 - \frac{m^{4/3}}{M^{4/3}}\right) U^n - u_m^n \left(1 - \frac{m^{4/3}}{M^{4/3}}\right)^{3.5}} \times \frac{u_{m-1}^n [(m+1)^{4/3} - m^{4/3}] - u_m^n [(m+1)^{4/3} - (m-1)^{4/3}] + u_{m+1}^n [m^{4/3} - (m-1)^{4/3}]}{(m-1)^{4/3} (2m+1) + 4m^{4/3} \cdot m - (m+1)^{4/3} (2m-1)} \quad (6)$$

where $U(n\tau)$ is denoted by U^n . The order of approximation of the derivatives, entering Eq. (6), is estimated. For the stability of dif-

Card 3/4

S/558/61/000/007/008/008
D299/D301

Solving von-Mises' equation ...

ference scheme (6), it is sufficient that

$$\tau = O\left(\frac{1}{M^2}\right). \quad (8)$$

The speed of convergence of the difference solution to the differential solution, is estimated. Numerical calculations, carried out according to scheme (6) for various $U(t)$, yielded satisfactory results. Scheme (6) has the additional merit of requiring small storage capacity. A similar scheme was used for solving Dorodnitsyn's equation for a viscous compressible fluid (in the references). There are 4 references: 3 Soviet-bloc and 1 non-Soviet-bloc. The reference to the English-language publication reads as follows: A.R. Mitchell and J.Y. Thomson, ZAMP, v. 9, 1958.

Academiya nauk SSSR. Gidrokhimicheskiy Institut

Gidrokhimicheskiye materialy, t. XX (Hydrochemical substances, v.30) Moscow, Izd-vo AN SSSR, 1960. 213 p. Errata slip inserted. 2,000 copies printed.

Sponsoring Agency: Academiya nauk SSSR. Gidrokhimicheskiy Institut (Novocherkassk).

Editorial Board (Title page): Resp. Ed. O. A. Alekin, M. V. Veselovskiy, Deputy Resp. Ed. V. G. Mtsko, G. S. Kononov, M. I. Kriventsov, P. A. Kryukov, Resp. Secretary and K. G. Lazarev. Ed. of Publishing House: D. M. Trifonov. Tech. Ed.: I. T. Dorokhina.

PURPOSE: This publication is intended for hydrologists, hydrochemists, and hydrometeorologists.

COVERAGE: This is a collection of 22 articles on the hydrochemistry of rivers and water bodies in the USSR. The authors discuss pollution, spectrographic methods of determining the content of microelements in water, and the content and discharge of ions, gases, as well as chemical, biogenic, and organic substances. A map showing the distribution of the ions discharge of rivers in the USSR is the most complete to appear in print to date. No personalities are mentioned. Each article is accompanied by references.

"Utilization of Light-Weight Concrete in Hydraulic Structures," Ye. I. Dyshko, 1 p

"Gidrotekh Stroi" No 5

Describes investigations of lithoidal pumice as filler for concrete employed in hydraulic structures. Gives composition and mechanical properties of some concretes made with pumice sand and gravel. Concludes such types of concrete, having lower strength than regular concrete, may be used under certain conditions in hydraulic structures, but subject requires further investigation.

AUTHOR: Dyshlis, A.A., (Reshetilovka, Poltavskaya Oblast) 47-58-3-16/27

TITLE: How to Stimulate an Interest in Physics Among the Students
(Vospitaniye na urokakh interesa uchashchikhsya k fizike)

PERIODICAL: Fizika v Shkole, 1958, Nr 3, pp 59-60 (USSR)

ABSTRACT: The success in teaching any subject depends on the interest of the students for the subject, but interest alone is not sufficient, the teacher should try to develop among his students the creative genius. To achieve this, it is therefore necessary to teach physics in such a manner that the students will face problems which will encourage them towards creative and independent work. The showing of popular scientific films, the organization of problem solving contests, etc., are ways of attaining this end.

PERIODICAL: Metallurg, 1960, Nr 1, p 39 (USSR)

ABSTRACT: Based on the experience at the Combine imeni A. K. Serov (Kombinat imeni A. K. Serova) in rolling ball-bearing steel ingots on an 850 mill, the Central Plant Laboratory (TsZL) established that preliminary tempering of cold ingots at 680° C combined with heating of ingots in the soaking pit (with temperature of heating chambers not higher than 200° C) decreased rejects from transverse cracks from 6.5 to 0.1-0.3%.

ASSOCIATION: Metallurgical Combine imeni A. K. Serov (Metallurgicheskiy imeni A. K. Serova)
